In mathematics, an abelian group, also

called a commutative group, is a group in which the result of applying the group operation to two group elements does not depend on the order in which they are written. That is, the group operation is commutative. With addition as an operation, the integers and the real numbers form abelian groups, and the

An abelian group is a group in which the law of composition is commutative, i.e. the group law \circ satisfies $g \circ h = h \circ g$.

Download Ebook Abelian Groups University Of

$g \circ h = h \circ g$ for any g, h in the group. Abelian groups are generally simpler to analyze than nonabelian groups are, as many objects of interest for a given group simplify to special cases when the group is abelian.
