Basel III: A global regulatory framework for more resilient banks and banking systems 3 10. The Committee is introducing these changes in a manner that minimises the disruption to capital instruments that are currently outstanding. It also continues to review the role that contingent capital should play in the regulatory capital framework.

~~Basel III: A global regulatory framework for more ...~~

Sections III, IV and V deal with the validation of the three key risk components in the regulatory capital calculation: PD, LGD and EAD. Various quantitative validation methods for rating systems and PD estimates are discussed in Section III. The purpose is to provide a general assessment of methods that measure the discriminatory power of a rating system and the performance of the PD quantification (calibration).

~~Studies on the Validation of Internal Rating Systems (revised)~~

Under the Basel II guidelines, banks are allowed to use their own estimated risk parameters for the purpose of calculating regulatory capital. This is known as the internal ratings-based (IRB) approach to capital requirements for credit risk. Only banks meeting certain minimum conditions, disclosure requirements and approval from their national supervisor are allowed to use this approach in ...

for managing credit risk

Credit Risk Credit risk is the risk of loss that may occur from the failure of any party to abide by the terms and conditions of any financial contract, principally, and market risk. Their key function is to ensure that banks hold enough cash reserves to meet their financial obligations and survive in financial and economic distress.

types of credit, and the set up of their data and systems. Banks using the IRB approach should consider the following areas: Product offering and pricing. The relative attractiveness of different credit products will shift based on the associated cost of capital. It is unlikely that the Basel 4 IRB changes by themselves would lead to a reduction
