An A -algebra B is said to be commutative if the ring B is commutative.

Let $\varphi : A \rightarrow B$ be an A -algebra. Then B

becomes an A -module

via φ , i.e. with scalar

multiplication given by

$ab = \varphi(a)b$ for $a \in A$, $b \in B$.

Let 1_B denote the

Read Book

Basic

multiplicative identity of the ring B , to distinguish it from the multiplicative identity 1 of A .

Let m be the ideal consisting of all nonunits. Since $0 \in m$, 0 is a nonunit, so $1 \notin m$, and it follows that the ideal m is proper. Now, if b is any proper ideal

Read Book

Basic

of A then all elements of b are nonunits, so $b \subseteq m$. Thus all proper ideals are contained in m , so m is the unique maximal ideal of A .
