Maternal and Child Health and Survival Over the past 25 years, the world has reduced child mortality by more than half and maternal mortality by nearly as much. In spite of this progress, 15,000 children still die each day around the globe from preventable causes such as diarrhea and pneumonia.

Maternal and Child Health and Survival | Save the Children

Improving the survival chances of newborns, children and mothers is an urgent global challenge. UNICEF/UN0241753/Dejongh. Children, newborns and mothers have a greater chance of surviving today than they did just two decades ago. Still, diseases like pneumonia, malaria and diarrhoea – along with pregnancy- and birth-related complications – claim the lives of millions of children and mothers every year.

Maternal, newborn and child survival | UNICEF

Our child health programs focus on empowering frontline health workers to deliver preventative and curative care to address three of the major killers of children under 5: pneumonia, diarrhea and malaria. Trained and supported frontline health workers in the most-in-need communities and countries can often deliver lifesaving care such as immunizations, oral rehydration solution, zinc, antibiotics and malaria drugs, ultimately increasing access to and the quality of child health services.

Healthy children are the foundation of a healthy future Remarkable progress has been made in improving child survival over the past 25 years. Since 1990, child mortality rates have been reduced by more than half. Under-five deaths dropped from 12.7 million per year in 1990 to 5.9 million in 2015.

Child Health - Survive & Thrive

There has been a concerted effort during the past few years by governments and organizations to improve child health and survival in developing countries. UNICEF has been in the forefront of this effort through its GOBI-FFF programme; G=Growth monitoring, O=Oral rehydration therapy, B=Breast feeding, I=Immunization, F=Female education, F=Family spacing, and F=Food supplements.

Child health and survival. The UNICEF GOBI-FFF program.

Child survival is a field of public health concerned with reducing child mortality. Child survival interventions are designed to address the most common causes of child deaths that occur, which include diarrhea, pneumonia, malaria, and neonatal conditions. Of the portion of children under the age of 5 alone, an estimated 5.6 million children die each year mostly from such preventable causes.

Child mortality - Wikipedia

In 2019 an estimated 5.2 million children under 5 years died mostly from preventable and treatable causes. Children aged 1 to 11 months accounted for 1.5 million of these deaths while children aged 1 to 4 years accounted for 1.3 million deaths. Newborns (under 28 days) accounted for the remaining 2.4 million deaths.

Children: improving survival and well-being

This improvement of child health would still mean terrible suffering: 86 million child deaths in the SDG era. And while these UN projections expect a further improvement of global child health this trajectory would fall short of reaching the SDG. The scenario in green shows what it would mean to reach the SDGs.

Child and Infant Mortality - Our World in Data

It includes all types of physical and/or emotional ill-treatment, sexual abuse, neglect, negligence and commercial or other exploitation, which results in actual or potential harm to the child ' s health, survival, development or dignity in the context of a relationship of responsibility, trust or power. Scope of the problem

Child maltreatment - World Health Organization

Current coverage for many of these interventions is extremely variable, with big contrasts between rural and urban populations for some basic newborn and child survival interventions such as skilled care at birth, measles vaccination, and nutrition support programmes

tackling chronic under-nutrition problems such as stunting (see fig D on bmj.com).

Child health and survival in the Eastern Mediterranean ...

Child Health The world has made substantial progress in reducing child mortality in the past few decades. Globally, the under-five mortality rate dropped from 93 deaths per 1,000 live births in 1990 to 41 in 2016. This remarkable progress in improving child survival since 2000 has saved the lives of 50 million children under age five.

Child Health | Maternal Child Survival Program

The factors examined to explain potential child survival inequalities among ethnic groups included residence in the largest city, household economic conditions, educational attainment and nutritional status of the mothers, use of modern maternal and child health services including immunization, and patterns of fertility and migration.

Inequality of child mortality among ethnic groups in sub ...

Maternal, newborn and child survival UNICEF works to end preventable maternal, newborn and child deaths by scaling up essential maternal and newborn care services, sustaining immunization programmes, and supporting preventive, promotive and curative services for pneumonia, diarrhoea, malaria and other child health conditions.

Health | UNICEF

Threats to child survival and health While children appear to be largely spared the direct mortality impacts of COVID-19, the indirect effects stemming from strained health systems and disruptions to life-saving health services such as immunization and antenatal care, can result in devastating increases in child deaths.

COVID-19 and children - UNICEF DATA

The Maternal & Child Survival Program was a multi-partner, flagship program in support of USAID ' s priority goal of preventing child and maternal deaths. Our work was evidence-based and results oriented.
