This short book explores a core group of 40 topics that tend to go unexplored in an Introductory Economics course. Though not a replacement for an introductory text, the work is intended as a supplement to provoke further thought and discussion by juxtaposing blackboard models of the economy with empirical observations. Each chapter starts with a short "refresher" of standard neoclassical economic modelling before getting into real world economic life. Komlos shows how misleading it can be to mechanically apply the perfect competition model in an oligopolistic environment where only an insignificant share of economic activity takes place in perfectly competitive conditions. Most economics texts introduce the notion of oligopoly and differentiate it from the perfect competition model with its focus on "price takers." Komlos contends that oligopolies are "price makers" like monopolies and cause consumers and economies nearly as much harm. Likewise, most textbook authors eschew any distortions of market pricing by government, but there is usually little discussion of the real impact of minimum wages, which Komlos corrects. The book is an affordable supplement for all basic economics courses or for anyone who wants to review the basic ideas of economics with clear eyes.

"The Handbook reflects the state of the art in the theory and practice of central banking. It covers all the essential areas that have come under scrutiny since the global financial crisis of 2007-9"--

As the debates about the recent global recession and the subsequent recovery have clearly shown, our understanding of these questions has been very limited. This comprehensive text puts the latest global recession and ongoing recovery in perspective. With the support of a companion website and DVD, we have created several multimedia tools to help understand the basics.

Despite their obvious importance, the ethical implications of climate change are often neglected in economic evaluations of mitigation and adaptation policies. Economic climate models provide estimates of the value of mitigation benefits, provide understanding of the costs of reducing emissions, and develop tools for making policy choices under uncertainty. They have thus offered theoretical and empirical instruments for the design and implementation of a range of climate policies, but the ethical assumptions included in the calculations are usually left unarticulated. This book, which brings together scholars from both economics and ethical theory, explores the interrelation between climate ethics and economics. Examining a wide range of topics including sustainability, conceptions of value, risk management and the monetization of harm, the book will explore the ethical limitations of economic analysis but will not assume that economic theory cannot accommodate the concerns raised. The aim in part is to identify ethical shortcomings of economic analysis and to propose solutions. Given the on-going role of economics in government thinking on mitigation, a constructive approach is vital if we are to deal adequately with climate change. This volume will be of great interest to students and scholars of environmental ethics, economics, political science, political philosophy and the philosophy of economics.

This conference proceedings volume presents advanced methods in time series estimation models that are applicable various areas of applied economic research such as international economics, macroeconomics, microeconomics, finance economics and agricultural economics. Featuring contributions presented at the 2018 International Conference on Applied Economics (ICOAE) held in Warsaw, Poland, this book presents contemporary research using applied econometric method for analysis as well as country specific studies with potential implications on economic policy. Applied economics is a rapidly growing field of economics that combines economic theory with econometrics to analyse economic problems of the real world usually with economic policy interest. ICOAE is an annual conference started in 2008 with the aim to bring together economists from different fields of applied economic research in order to share methods and ideas. Approximately 150 papers are submitted each year from about 40 countries around the world. The goal of the conference and the enclosed papers is to allow for an exchange of experiences with different applied econometric methods and to promote joint initiatives among well-established economic fields such as finance, agricultural economics, health economics, education economics, international trade theory and management and marketing strategies. Featuring global contributions, this book will be of interest to researchers, academics, professionals and policy makers in the field of applied economics and econometrics.

Mainstream textbooks present economics as an objective science, free from value judgements. The Microeconomics Anti-Textbook demonstrates this to be a myth — one which serves to make such textbooks not only off-puttingly bland, but also dangerously misleading in their justification of the status quo and neglect of alternatives. In this fully updated and expanded edition of their celebrated book, Professors Rod Hill and Tony Myatt lay out the essentials of each topic in the standard texts in a clear and concise way, before presenting an 'anti-text' analysis and critique. Challenging the assumptions, arguments, and models, Hill and Myatt provide the essential guide to decoding the textbooks, and show that real economics is far more interesting - and subversive - than the simplistic version presented to students.

This edited volume brings together original scientific studies on current economic and developmental issues in the Balkan region, and is composed of papers by 25 authors from seven different countries. The Balkan region has gained significant interest in recent years due to its location and strategic position, representing a doorway to Europe, and the region ' s stability and progress have direct consequences on various European countries. Because of this strategic position, there is currently much debate regarding a potential partnership of the Balkan states with the European Union. This book offers insights into the current economic and developmental status of the countries in this region, offering a series of chapters that analyse the area from a variety of perspectives. It begins with a discussion on the recent history of the region, especially with reference to the former Yugoslavia and its break-up after the turbulence experienced in 1990s. Other sections are complementary to each other in that they offer comparisons of the Balkan states in their economic progress at the micro and macro levels. Topics such as European integration policies and effects, economic transition, regional trade, tax incentive policy, regional capital markets, regional development agencies and systems, remittances and foreign aid contributions, import-export policies, fiscal policies, analysis of regional microfinance, and the tourism sectors are explored in detail throughout the book.
