Welcome another lesson in the Mastering Excel series. This lesson is a slight departure from previous lessons. This lesson is looking into the future and delving into what Excel is becoming: a powerhouse for data analysis. Power Query is the first step in analyzing data, before you do any substantial analysis, you need to get the data into Excel. Not only get data into Excel but probably clean it up. Parse columns, join columns, remove errors, you know, that kind of stuff. Of course, you can add a column with formulas to do this. That will work for 100 or 1,000 rows of data. What about 250,000, 700,000 or even 1,000,000 rows? Excel really slows down with that many calculations. Power Query solves this. It shapes the data before it gets into Excel. You will learn how to use Power query to split columns, parse data, check for errors, get data from multiple files in a folder, and more. Power Query remembers all the steps you took. To get new data, you simply have to click the 'Refresh' button. \*\*\*OK, THIS IS IMPORTANT\*\*\* Power Query is a new feature in Excel. It is standard in Excel 2016 and it can be installed in some previous versions of Excel, but not all. Before buying this lesson, please go to this Microsoft website, check out the requirements and try to install Power Query. <https://www.microsoft.com/en-us/download/details.aspx?id=39379> If you cannot install Power Query because you do not have the correct version of Excel, you will not be able to follow along with this lesson.

In this lesson we cover all the options for applying conditional formats to a workbook. Conditional formats are formatting rules that we can apply so when a cell's number changes, the format will change automatically. This is an excellent feature to use to draw a user's attention to outlying numbers, problem areas or to give a quick visual summaries of the data. We will cover: \* Highlight Cell Rules \* Top/Bottom Rules \* Data Bars \* Color Scales \* Icon Sets \* Using Formulas In all the above, we will also go into how to customize all the options to make any report automatically update itself according to the criteria we set. Like the other lessons, this lesson contains a link where you can download a follow along workbook and practice what is covered. Note: If you know about conditional formatting and consider yourself an Excel expert, this book is not for you. This is for Excel beginners who want to learn about this feature in plain English with no technical jargon. The images, exercises and workbook are for Excel 2013 for Windows. Most of the images and exercises will work with Excel 2010/2007 (but there may be slight differences). The workbook will not work with Excel for Mac.
