In Judeans in Babylonia, Tero Alstola presents a comprehensive investigation of deportees in the sixth and fifth centuries BCE. By using cuneiform documents as his sources, he offers the first book-length social historical study of the Babylonian Exile, commonly regarded as a pivotal period in the development of Judaism. The results are considered in the light of the wider Babylonian society and contrasted against a comparison group of Neirabian deportees. Studying texts from the cities and countryside and tracking developments over time, Alstola shows that there was notable diversity in the Judeans' socio-economic status and integration into Babylonian society.

The resulting middle-class abandonment of urban education in Columbus produced an increasingly poor, African American city school system and a powerful form of defensive activism within the overwhelmingly white suburban systems.

Labor and Love in Guatemala re-envisions the histories of labor and ethnic formation in Spanish America. Taking cues from gender studies and the "new" cultural history, the book transforms perspectives on the major social trends that emerged across Spain's American colonies: populations from three continents mingled; native people and Africans became increasingly hispanized; slavery and other forms of labor coercion receded. Komisaruk's analysis shows how these developments were rooted in gendered structures of work, migration, family, and reproduction. The engrossing narrative reconstructs Afro-Guatemalan family histories through slavery and freedom, and tells stories of native working women and men based on their own words. The book takes us into the heart of sweeping historical processes as it depicts the migrations that linked countryside to city, the sweat and filth of domestic labor, the rise of female-headed households, and love as it was actually practiced—amidst remarkable permissiveness by both individuals and the state.

The classic respected series in a stunning new design. This edition of The Knight's Tale from the highly-respected Selected Tales series includes the full, complete text in the original Middle English, along with an in-depth introduction by A. C. Spearing, detailed notes and a comprehensive glossary.

Organized nanoassemblies of inorganic nanoparticles and organic molecules are building blocks of nanodevices, whether they are designed to perform molecular level computing, sense the environment or improve the catalytic properties of a material. The key to creation of these hybrid nanostructures lies in understanding the chemistry at a fundamental level. This book serves as a reference book for researchers by providing fundamental understanding of many nanoscopic materials.

Historically speaking, theology can be said to operate " materiaphobically. " Protestant Christianity in particular has bestowed upon theology a privilege of the soul over the body and belief over practice, in line with the distinction between a disembodied God and the inanimate world " He " created. Like all other human, social, and natural sciences, religious studies imported these theological dualisms into a purportedly secular modernity, mapping them furthermore onto the distinction between a rational, " enlightened " Europe on the one hand and a variously emotional, " primitive, " and " animist " non-Europe on the other. The " new materialisms " currently coursing through cultural, feminist, political, and queer theories seek to displace human privilege by attending to the agency of matter itself. Far from being passive or inert, they show us that matter acts, creates, destroys, and transforms—and, as such, is more of a process than a thing. Entangled Worlds examines the intersections of religion and new and old materialisms. Calling upon an interdisciplinary throng of scholars in science studies, religious studies, and theology, it assembles a multiplicity of experimental perspectives on materiality: What is matter, how does it materialize, and what sorts of worlds are enacted in its varied entanglements with divinity? While both theology and religious studies have over the past few decades come to prioritize the material contexts and bodily ecologies of more-than-human life, Entangled Worlds sets forth the first multivocal conversation between religious studies, theology, and the body of " the new materialism. " Here disciplines and traditions touch, transgress, and contaminate one another across their several carefully specified contexts. And in the responsiveness of this mutual touching of science, religion, philosophy, and theology, the growing complexity of our entanglements takes on a consistent ethical texture of urgency.

Talking about Leaving Revisited discusses findings from a five-year study that explores the extent, nature, and contributory causes of field-switching both from and among "STEM" majors, and what enables persistence to graduation. The book reflects on what has and has not changed since publication of Talking about Leaving: Why Undergraduates Leave the Sciences (Elaine Seymour & Nancy M. Hewitt, Westview Press, 1997). With the editors' guidance, the authors of each chapter collaborate to address key questions, drawing on findings from each related study source: national and institutional data, interviews with faculty and students, structured observations and student assessments of teaching methods in STEM gateway courses. Pitched to a wide audience, engaging in style, and richly illustrated in the interviewees' own words, this book affords the most comprehensive explanatory account to date of persistence, relocation and loss in undergraduate sciences. Comprehensively addresses the causes of loss from undergraduate STEM majors—an issue of ongoing national concern. Presents critical research relevant for nationwide STEM education reform efforts. Explores the reasons why talented undergraduates abandon STEM majors. Dispels popular causal myths about why students choose to leave STEM majors. This volume is based upon work supported by the Alfred P. Sloan Foundation Award No. 2012-6-05 and the National Science Foundation Award No. DUE 1224637.

Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs "who account for more than 9 percent of enrollment in grades K-12 in U.S. schools" are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.

This book is about nature considered as the totality of physical existence, the universe, and our present day attempts to understand it. If we see the universe as a network of networks of computational processes at many different levels of organization, what can we learn about physics, biology, cognition, social systems, and ecology expressed through interacting networks of elementary particles, atoms, molecules, cells, (and especially neurons when it comes to understanding of cognition and intelligence), organs, organisms and their ecologies? Regarding our computational models of natural phenomena Feynman famously wondered: "Why should it take an infinite amount of logic to figure out what one tiny piece of space/time is going to do?" Phenomena themselves occur so quickly and automatically in nature. Can we learn how to harness nature's computational power as we harness its energy and materials? This volume includes a selection of contributions from the Symposium on Natural Computing/Unconventional Computing and Its Philosophical Significance, organized during the AISB/IACAP World Congress 2012, held in Birmingham, UK, on July 2-6, on the occasion of the centenary of Alan Turing's birth. In this book, leading researchers investigated questions of computing nature by exploring various facets of computation as we find it in nature: relationships between different levels of computation, cognition with learning and intelligence, mathematical background, relationships to classical Turing computation and Turing's ideas about computing nature - unorganized machines and morphogenesis. It addresses questions of information, representation and computation, interaction as communication, concurrency and agent models; in short this book presents natural computing and unconventional computing as extension of the idea of computation as symbol manipulation.

5951 Dishcloths Make your kitchen more colorful! Add a little luxury to your bath! These cloths to crochet include textures, stripes, circles, and flowers. When you need a quick gift, these are your fast and fun, go-to designs! BONUS: online technique videos. 17 designs for Easy to Easy+ skill level, to make using medium or fine weight yarns: Fast Favorite, Flower Tile, and Basket Weave by Mary Jane Protus; Shells by Leisure Arts; Nine Patch, Blossom, and Rainbow by Shobha Govindan; Spiral by Sarah J. Green; Lacy Stripes by Sue Galucki; Variegated by Lois J. Long; Clusters by Rhona Czepiel; Crisscross and Around the Block by Anne Halliday; Sunshine Daisy by Joan E. Reeves; Puffs and Borders by Maggie Weldon; and Checks by Roberta Maier.
