List of Basic Economic Problems and their
Solution

Hence, by Theorem 4.11, v is differentiable.

The Bellman equation for this problem is
$$v(k) = \max_y \{ \beta v((1-\delta)k + y) + u(y) \}$$
so the Euler equation (Inada conditions rule out corner solutions) is
$$\beta [u'(y) + (1-\delta)v'(k)] = v'(k) \quad (5.1)$$
 where y is the value of y that satisfies this equation.
