If you have a straight sided glass container, you can quickly check some basics about your soil. Take about $\frac{3}{4}$ cup of you soil (dig down about 4-6 " to take a sample) put it into the glass container and add about 1.5-2 cups water. Shake the solution well until your soil is completely broken up and mixed in the water.

The Dirt on Dirt - Basics | Proven Winners

Rock is the source of the inorganic (nonliving) materials found in soils. The rock is broken down into sediments (small pieces of rock and minerals) through the process of weathering. These sediments are a component of soil. Most soils are formed from sediments that have been moved by erosion-blown by winds, moved by water or glaciers.

The Dirt on Soil

" Dirt to Soil skillfully describes the learning process and rich rewards of perseverance in the conversion from yield-driven farm practices that degrade soils to the regeneration processes that provide pride, productivity, nutrition, health, and sustainability to the basic infrastructure of society agriculture. The core values of ...
