In 1120, the Moors established Europe's first paper mill at Valencia, Spain (then called Xativa). From there, this Chinese invention passed to Italy, Germany, and other parts of Europe. Paper helped spread knowledge, much of which was gleaned from the great Asian culture centers along the Silk Road, that enabled Europe's High Middle Ages.

A great way to give meaning to the story Jesus is Crucified and to explain the story of the Burial and Resurrection is to tell them using a single sheet of paper. Notebook paper or typing paper is fine. You will be tearing layers of paper so I would suggest light or thin paper instead of something thick.

By the 7th century, papermaking had spread to Korea and Japan, and by the 8th century (via regional conflict or the Silk Road, depending on whom you ask) it had made its way to the Islamic world, where the earliest paper mills (the most significant innovation in papermaking technology since moulds were first employed shortly after Cai Lun's era) are known to have been utilized to make the process more efficient, and thereby more profitable as a major industry.

Complementing Science-Fiction: The Early Years, which surveys science-fiction published in book form from its beginnings through 1930, the present volume covers all the science-fiction printed in the genre magazines--Amazing, Astounding, and Wonder, along with offshoots and minor magazines--from 1926 through 1936. This is the first time this historically important literary phenomenon, which stands behind the enormous modern development of science-fiction, has been studied thoroughly and accurately. The heart of the book is a series of descriptions of all 1,835 stories published during this period, plus bibliographic information. Supplementing this are many useful features: detailed histories of each of the magazines, an issue by issue roster of contents, a technical analysis of the art work, brief authors' biographies, poetry and letter indexes, a theme and motif index of approximately 30,000 entries, and general indexes. Science-Fiction: The Gernsback Years is not only indispensable for reference librarians, collectors, readers, and scholars interested in science-fiction, it is also of importance to the study of popular culture during the Great Depression in the United States. Most of its data, which are largely based on rare and almost unobtainable sources, are not available elsewhere.

The book describes how Lisa Meitner, of Jewish heritage, found herself working as a physicist at the Kaiser Wilhelm Institute in Berlin when the Nazis came to power in 1933; how she was hounded out of the country and forced to relocate to Sweden; how German chemists Otto Hahn and Fritz Strassman continued with the project □ on the effect of bombarding uranium (the heaviest known element at the time) with neutrons, a project which Lise herself had initiated, being the intellectual leader of the group. It describes how Hahn and Strassmann, with whom she kept in touch, came up with some extraordinary results which they were at a loss to explain; how Lise, and her nephew Otto Frisch, who was also a physicist, confirmed what they had achieved - the □splitting of the atom□, no less, and provided them with a theoretical explanation for it. This laid the foundation for nuclear power, medical-scanning technology, radiotherapy, electronics, and of course, the atomic bomb - the creation of which filled Lise with horror. It describes the crucial part that Lise played in our understanding of the world of atoms, and how deliberate and strenuous attempts were made to deny her contribution; to belittle her achievements, and to write her out of the history books, even though Albert Einstein said she was even □more talented than Marie Curie herself□. The author is fortunate and honoured to have been granted several interviews with Lise□s nephew Philip Meitner □ himself a refugee from the Nazis - who with his wife Anne, provided much valuable information and many photographs.

"The Amazing Story of the Fantasticks is the detailed history of how this fabulously successful show by Tom Jones and Harvey Schmidt came into being and how and why it succeeded. In tracing the evolution of the show from an idea to a cultural phenomenon, the book takes readers through the countless auditions to attract backers, the search for theaters to hold tryouts (which indicated disaster), and eventual popular success. Among the actors who have performed in the musical are Anna Maria Alberghetti, Richard Chamberlain, Elliott Gould, Bert Lahr, Liza Minnelli, Robert Goulet, and Glenn Close."--Jacket.

This is the first of three volumes that chart the history of the science fiction magazine from the earliest days to the present. This first volume looks at the exuberant years of the pulp magazines. It traces the growth and development of the science fiction magazines from when Hugo Gernsback launched the very first, *Amazing Stories*, in 1926 through to the birth of the atomic age and the death of the pulps in the early 1950s. These were the days of the youth of science fiction, when it was brash, raw and exciting: the days of the first great space operas by Edward Elmer Smith and Edmond Hamilton, through the cosmic thought variants by Murray Leinster, Jack Williamson and others to the early 1940s when John W. Campbell at *Astounding* did his best to nurture the infant genre into adulthood. Under him such major names as Robert A. Heinlein, Isaac Asimov, A. E. van Vogt and Theodore Sturgeon emerged who, along with other such new talents as Ray Bradbury and Arthur C. Clarke, helped create modern science fiction. For over forty years magazines were at the heart of science fiction and this book considers how the magazines, and their publishers, editors and authors influenced the growth and perception of this fascinating genre.

Growing up in middle class Toledo, Ohio in the 1980s career choices were somewhat limited to working in factories or in the medical field. I came from a very stable home as the oldest of six kids with two hard working parents that provided for us but didnt spoil us. Our parents gave us a private education grades 1 - 12 and my Father helped get me a summer job to pay for college at the local General Motors plant where he worked. In college I had two majors, one in Political Science and one in Communications. As part of my Communications major I got an internship at the local rock n roll radio station which resulted in becoming the morning show producer for the the well known morning show team of Karlson and McKenzie with that radio station. This story is about what happened from there. Its about dealing with the unpredictable changes that happen with your company and your career and what happens when they overlap. Its also a story about who and what can influence your decision to stay, or to leave.
