Through engaging stories and the use of students ' voices, this book corrects persistent misconceptions about youth who drop out of high school. Based on research conducted with high school dropouts in both urban and rural communities, the authors argue that, contrary to popular belief, most dropouts are not disengaged from school at an early age. Many have positive memories of their education, both social and academic, that educators and policymakers can draw on to create successful prevention and intervention practices. The narratives and insights presented here will help readers to better understand the interplay of school-related and personal factors that lead students to drop out of school. “ Why We Drop Out ” is

essential reading for K – 12 educators, school principals, counselors, psychologists, and everyone concerned with our nation ’ s dropout crisis. “ Every educator will recognize in these stories the daily opportunities that adults have to reach out and grab onto kids who are desperate for a hand and just need someone to pull them over that line. ” —From the Foreword by Camille A. Farrington, PhD, author of *Failing at School: Lessons for Redesigning Urban High Schools* “ This book greatly improves our understanding of the complex and long-term process of dropping out of high school. ” —Russell W. Rumberger, UC Santa Barbara, director, California Dropout Research Project “ A must-read for any teacher, principal, or superintendent interested in changing the lives of our students most at risk. ” —Greg Baker, superintendent, Bellingham Public Schools “ This is a book that everyone with a stake in education must read! ” —Dr. Shivohn Garcia, SUNY Empire State College

These engaging narratives and unique insights will help readers to better understand the interplay of school-related and personal factors that lead students to drop out of school. It is essential reading for K-12 educators, school principals, counselors, psychologists, and everyone concerned with our nation's "dropout crisis."

Most kids in the developed world finish high school—but not in the United States. More than a million drop out every year, and the numbers are rising. *Dropping Out* provides answers to fundamental questions: Who drops out, and why? What happens to them when they do? How can we prevent at-risk kids from short-circuiting their

futures?

Higher education today faces a host of challenges, from quality to cost. But too little attention gets paid to a startling fact: four out of ten students -- that's more than ten percent of the entire population -- who start college drop out. The situation is particularly dire for black and Latino students, those from poor families, and those who are first in their families to attend college. In *The College Dropout Scandal*, David Kirp outlines the scale of the problem and shows that it's fixable -- we already have the tools to boost graduation rates and shrink the achievement gap. Many college administrators know what has to be done, but many of them are not doing the job -- the dropout rate hasn't decreased for decades. It's not elite schools like Harvard or Williams who are setting the example, but places like City University of New York and Long Beach State, which are doing the hard work to assure that more students have a better education and a diploma. As in his *New York Times* columns, Kirp relies on vivid, on-the-ground reporting, conversations with campus leaders, faculty and students, as well as cogent overviews of cutting-edge research to identify the institutional reforms--like using big data to quickly identify at-risk students and get them the support they need -- and the behavioral strategies -- from nudges to mindset changes -- that have been proven to work. Through engaging stories that shine a light on an underappreciated problem in colleges today, David Kirp's hopeful book will prompt colleges to make student success a top priority and push more students across the finish line, keeping their hopes of achieving the American Dream

alive.

Education is broken and most graduates are broke. The purpose of this book is to start an important dialogue about college education. I will make the case for why I believe 70% of college students should drop out. The concept of giving our trust to the educational system without accountability has not worked. I believe it's time to ask serious questions: Why do we go to college in the first place? - Who should go to college and who shouldn't? - Can I succeed and do great things without college? - Why do tuition and textbooks cost as much as they do? - Have colleges simply become a big business (with tax-free status)? - Are the subjects taught in college sufficient for life or do we need an upgrade? Let me clarify something: this is NOT a book that declares that higher education is a terrible thing. Many professions require it, but I believe education can and does take place in many forms. As a college dropout and an autodidact, I've read over 1,200 books in the last 15 years and believe there are many paths we can take to get educated and do great things. Fair Warning: You may have passionate feelings about the points in this book. Regardless of how strong you feel one way or another, my desired outcome is to start a broad dialogue so we can process the issues - together. Ready?

The role played by testing in the nation's public school system has been increasing steadily-and growing more complicated-for more than 20 years. The Committee on Educational Excellence and Testing Equity (CEETE) was formed to monitor the

Get Free Why We Drop Out Understanding And Disrupting Student Pathways To Leaving School

effects of education reform, particularly testing, on students at risk for academic failure because of poverty, lack of proficiency in English, disability, or membership in population subgroups that have been educationally disadvantaged. The committee recognizes the important potential benefits of standards-based reforms and of test results in revealing the impact of reform efforts on these students. The committee also recognizes the valuable role graduation tests can potentially play in making requirements concrete, in increasing the value of a diploma, and in motivating students and educators alike to work to higher standards. At the same time, educational testing is a complicated endeavor, that reality can fall far short of the model, and that testing cannot by itself provide the desired benefits. If testing is improperly used, it can have negative effects, such as encouraging school leaving, that can hit disadvantaged students hardest. The committee was concerned that the recent proliferation of high school exit examinations could have the unintended effect of increasing dropout rates among students whose rates are already far higher than the average, and has taken a close look at what is known about influences on dropout behavior and at the available data on dropouts and school completion.

For years, we have considered school dropout rates as a problem occurring at the high-school level. However, this is actually an issue that originates and develops in elementary school. In *Do Children Drop Out of School in Kindergarten?* Gregory Hickman and Randy Heinrich show how high school dropouts in many ways drop out of school long before they reach high school. Using a comprehensive systems

Get Free Why We Drop Out Understanding And Disrupting Student Pathways To Leaving School

approach, Hickman and Heinrich argue that our policy makers, educators, parents, and community members need to scrutinize our education system, moving past fixing short-term symptoms to engaging core, long-term problems for deep, effective change. For real change to take place, our national agenda needs to address the dropout problem at the elementary level, long before kids enter high school.

In this provocative book, authors Washor and Mojkowski observe that beneath the worrisome levels of dropouts from our nation ' s high school lurks a more insidious problem: student disengagement from school and from deep and productive learning. To keep students in school and engaged as productive learners through to graduation, schools must provide experiences in which all students do some of their learning outside school as a formal part of their programs of study. All students need to leave school—frequently, regularly, and, of course, temporarily—to stay in school and persist in their learning. To accomplish this, schools must combine academic learning with experiential learning, allowing students to bring real-world learning back into the school, where it should be recognized, assessed, and awarded academic credit. Learning outside of school, as a complement to in-school learning, provides opportunities for deep engagement in rigorous learning.

Based on the narratives of Black and non-Black students, teachers, parents, and community workers, this book examines the dilemma of African-Canadian students who lose interest and leave school.
