Winterizing a 3.0l 4cyl mercruiser inboard engine. In Canada, it is very important to properly winterize marine equipment. Particularly inboard engines. If an engine is left full of water, and it freezes it will crack the block. an engine with a cracked block will need to be rebuilt, or replaced, and can cost upwards of \$10,000.00.

*How To Winterize An Inboard Engine - YouTube*

Many popular Mercruiser sterndrive and inboard engines use a closed cooling system that adds many years to the engine's life but requires a bit more care than open systems. Winterizing time is the perfect opportunity to take care of the closed cooling system, helping you ensure a trouble-free boating season next year. Step 1

*How to Winterize a Closed System in a Mercruiser | It ...*

If you've got an inboard or a sterndrive (inboard/outboard) boat motor, then winterizing is an absolute must-do. This process prevents gunk from building up, keeps condensation out of the fuel tank and just overall keeps your engine healthy. I've already covered winterizing pontoon boats, which usually have outboard motors.

*How to Fully Winterize Inboard Boat Motors in 4 Steps ...*

Adding Antifreeze and Fogging Oil to an Inboard engine. The procedure is a little different for an inboard power plant. Warm the engine up to operating temperature, just like with a sterndrive. Instead of using a winterizing kit, you'll need a five-gallon bucket, and enough antifreeze for your engine and related plumbing (at least two gallons).

Add fuel stabilizer to the tank and run the engine so the treatment circulates. Shut it off and let it cool. Next, "fog" the engine from a six-gallon remote tank. Add five gallons of gas, two quarts of TC-W3 two-stroke oil and five ounces of fuel stabilizer.

*Winterizing Freshwater-Cooled Engines | Boating Magazine*

You must winterize your MerCruiser 4.3L V6 before storing it. The engine sucks water up from the lake through the impeller to cool the engine. This water does not automatically drain out of the engine. Because water expands when it freezes, it's imperative to drain the water from the engine. The carburetor also needs special attention.

*How to Winterize the MerCruiser 4.3L V6 | It Still Runs*

Before putting your boat away for the winter, you must first winterize the motor. Your Mercruiser 3.0 uses the water in the lake to cool the engine while boating. This water stays inside the engine. Failure to remove the water will cause freezing. As the water freezes, it expands. This will cause the engine block to crack.
